DIRECTORY OF CENTRAL ASIAN HORTICULTURE EXPORTERS

FEBRUARY 2021

CONTENT

 FRESH FRUIT AND VEGETABLES	4
 DRIED FRUIT, NUTS AND PULSES	30
 PROCESSED FRUIT AND VEGETABLES	46
 TRANSPORT-LOGISTIC COMPANIES	59
 OVERVIEW OF TRANSPORTATION COSTS AND TRANSIT TIME TO SHIP CENTRAL ASIAN HORTICULTURE PRODUCTS TO KEY EXPORT MARKETS	63
 MAP OF LAND TRANSPORT ROUTES FOR THE DELIVERY OF CENTRAL ASIAN HORTICULTURE PRODUCTS TO EUROPEAN AND ASIAN COUNTRIES	84

Dear Reader!

Kazakhstan, Kyrgyz Republic, Tajikistan, Turkmenistan and Uzbekistan have been producing and trading a wide range of fruit and vegetables for centuries. This Directory has been developed by USAID's Competitiveness, Trade and Jobs activity (CTJ) as an easily accessible catalogue to showcase Central Asian growers, processors and trading companies willing and ready to export their horticultural products to new markets outside the region. The Directory is intended for use by horticulture importers, distributors, retail buyers and international trade fair organizers.

The Directory contains information in both English and Russian on 131 companies, including details of their products (by category), brands, distribution channels and contact details.

The Directory consists of the following sections:

- Fresh fruit and vegetables - apples, apricots, cherries, melons, plums, tomatoes and others;
- Dried fruit, nuts and pulses - cherries, prunes, raisins, pistachios and others;
- Processed fruit and vegetables - juices, jams, snacks, chips, fruit bars and others.

You can also find information in the Directory about transport and logistics companies and an overview of transportation costs and transit time from Central Asian cities to export destinations in Europe and Asia. Central Asian countries continue to increase their exports of fruit and vegetables to Eurasian Economic Union (EAEU), European Union (EU), Middle Eastern and South-East Asian markets. Fruit and vegetable exports from Uzbekistan have almost doubled over the past three years.

Some examples of the competitive advantages of the Central Asian region include:

- the climate and soil, which permit early spring harvest and a long growing season until late autumn for many products;
- the relatively low cost of resources, e.g., land and labor;
- the ability to access markets with reduced or zero duty under preferential trade agreements.

The Directory contains basic information about companies, which was valid at the time of compilation.

If you are interested in any of the products or companies described in this Directory, please contact the company directly using the contact details provided. The interactive format of the Directory allows you visit the website of each company or write an e-mail, thus facilitating the establishment of business linkages with exporters of horticultural products from Central Asia.

About the project

USAID's Competitiveness, Trade and Jobs activity facilitates trade and employment in horticulture, tourism, transport and logistics across the five Central Asian economies. By incentivizing firms to become more regionally competitive and by addressing cross-border impediments to trade, USAID helps to develop a more diverse and competitive private sector and generate export-driven growth.

Disclaimer

This Directory is made possible by the support of the American People through the United States Agency for International Development (USAID) Competitiveness, Trade and Jobs activity. The contents of this publication are the sole responsibility of the owners of the companies listed herein and do not reflect the views of USAID or the U.S. Government.

FRESH
FRUIT AND VEGETABLES

KAZAKHSTAN

CENTRAL ASIAN HORTICULTURE EXPORTERS

DALA_FRUIT.KZ LLP

Year of foundation: 2012

 Skype: info@yakyndost.com

NEDIR GALA INDIVIDUAL ENTERPRISE

Year of foundation: 2011
 Products: tomatoes, tomato paste
 Average capacity: 700-750 tons of tomatoes per year, 900-1,200 tons of tomato paste per year
 Production technology: greenhouse cultivation
 Export destination: Russia, Kazakhstan, Kyrgyz Republic
 Planned export countries: Commonwealth of Independent States (CIS) and Asian countries
 Contacts: 82 Ataturk Street, Ashgabat, Turkmenistan
 Tel.: +993 (124) 6-81-62, +993 (65) 70-88-28
 Fax: +993 (124) 6-81-60

OVERVIEW OF TRANSPORTATION COSTS
AND TRANSIT TIME TO SHIP CENTRAL ASIAN
HORTICULTURE PRODUCTS TO KEY EXPORT
MARKETS

OVERVIEW OF TRANSPORTATION COSTS AND TRANSIT TIME TO SHIP CENTRAL ASIAN HORTICULTURE PRODUCTS TO KEY EXPORT MARKETS

Freight rates for shipping horticulture products have been averaged from figures provided by a number of Central Asian transport and logistics companies. They are listed below.

Please note that actual transportation rates may be up to 30 per cent lower or up to 40 percent higher than the average rate listed below. Using temperature-controlled vehicles will increase the cost of transport due to additional costs for fuel lubricants, use of the cooling unit and depreciation costs.

Other factors can vary the cost of transportation. For example, a return load for the vehicle will reduce the outbound cost. The shipment of opportune cargo and the number of seaports will also affect transport costs

Transportation conditions for horticulture products

When preparing horticulture products for transport, fruit and vegetables should be:

- at a consistent stage of ripeness
- without dents or cracks
- in a clean condition
- without signs of damage from pathogenic pests and bacteria

During transportation, horticulture products must be packed in the appropriate container and packaging relevant to that product. For example:

- late potatoes in sacks or crates
- early potatoes in rigid containers
- onions and cabbage in wooden cases
- apples, apricots and grapes, etc. in cardboard boxes, corrugated cardboard or wooden cases
- bananas, kiwi, passion fruit, papaya, etc., are to be rigidly packed in plastic bags and carton trays

Temperature conditions:

Vegetables, greens, mushrooms	Temperature conditions (+ or - degrees Celcius)
Green, brown or pink tomatoes	+10, +15
Red Tomatoes	+6, +9
Potato	+6, +10
Garlic, onions	+2, +8
Cabbage	+1, +8
Frozen vegetables	-18, -20

Fruit and Berry	Temperature conditions (+ or - degrees Celcius)
Melon	+4, +8
Apricots	+2, +5
Grapes	+2, +5
Strawberry	+2, +5
Apples	+2, +5
Frozen vegetables	-18, -20

Ventilation during transportation of horticulture products

Appropriate cargo ventilation is important for rail and road transport. If the cargo is transported without forced ventilation, irreversible processes may occur in the product itself, which will affect its taste and shelf life. During transport, fruit and vegetables naturally emit carbon dioxide and ethylene which have a major impact on the quality of the product during transportation.

Moreover, adjusting the fresh air supply during transport is closely connected with temperature control. Fruit and vegetables 'breathe' and generate heat as a result. Therefore, to cool products to the required temperature, and to provide fresh air, the carrier should properly establish and maintain the cooling and ventilation system inside the vehicle.

In addition, attention must be paid during the loading process to correctly positioning products so as not to interfere with air circulation.

Packing horticulture products for transport

- Apples, grapes, apricots and cherries should be transported in boxes with a stacking height of less than 170 centimeters.
-
- Melons and watermelons should be transported in special containers not exceeding two rows.
-
- Potatoes or cabbages in bulk containers should not exceed 130 centimeters in height.

Other Transport Requirements

Certificates for phytosanitary compliance, vehicle conformity, cargo volume and route control etc. may be necessary. See the Horticulture Export Guide prepared by USAID's Competitiveness, Trade and Jobs activity for more details.

Tariffs for transportation of fruit and vegetable products
(at maximum tonnage)

Currency exchange rate (as of 21.07.2020)			
	Tenge	Dollar	Euro
1 \$	T 413.45	-----	€ 0, 87
1 €	T 471.79	\$ 1,14	-----

Transportation of perishable goods from Kazakhstan

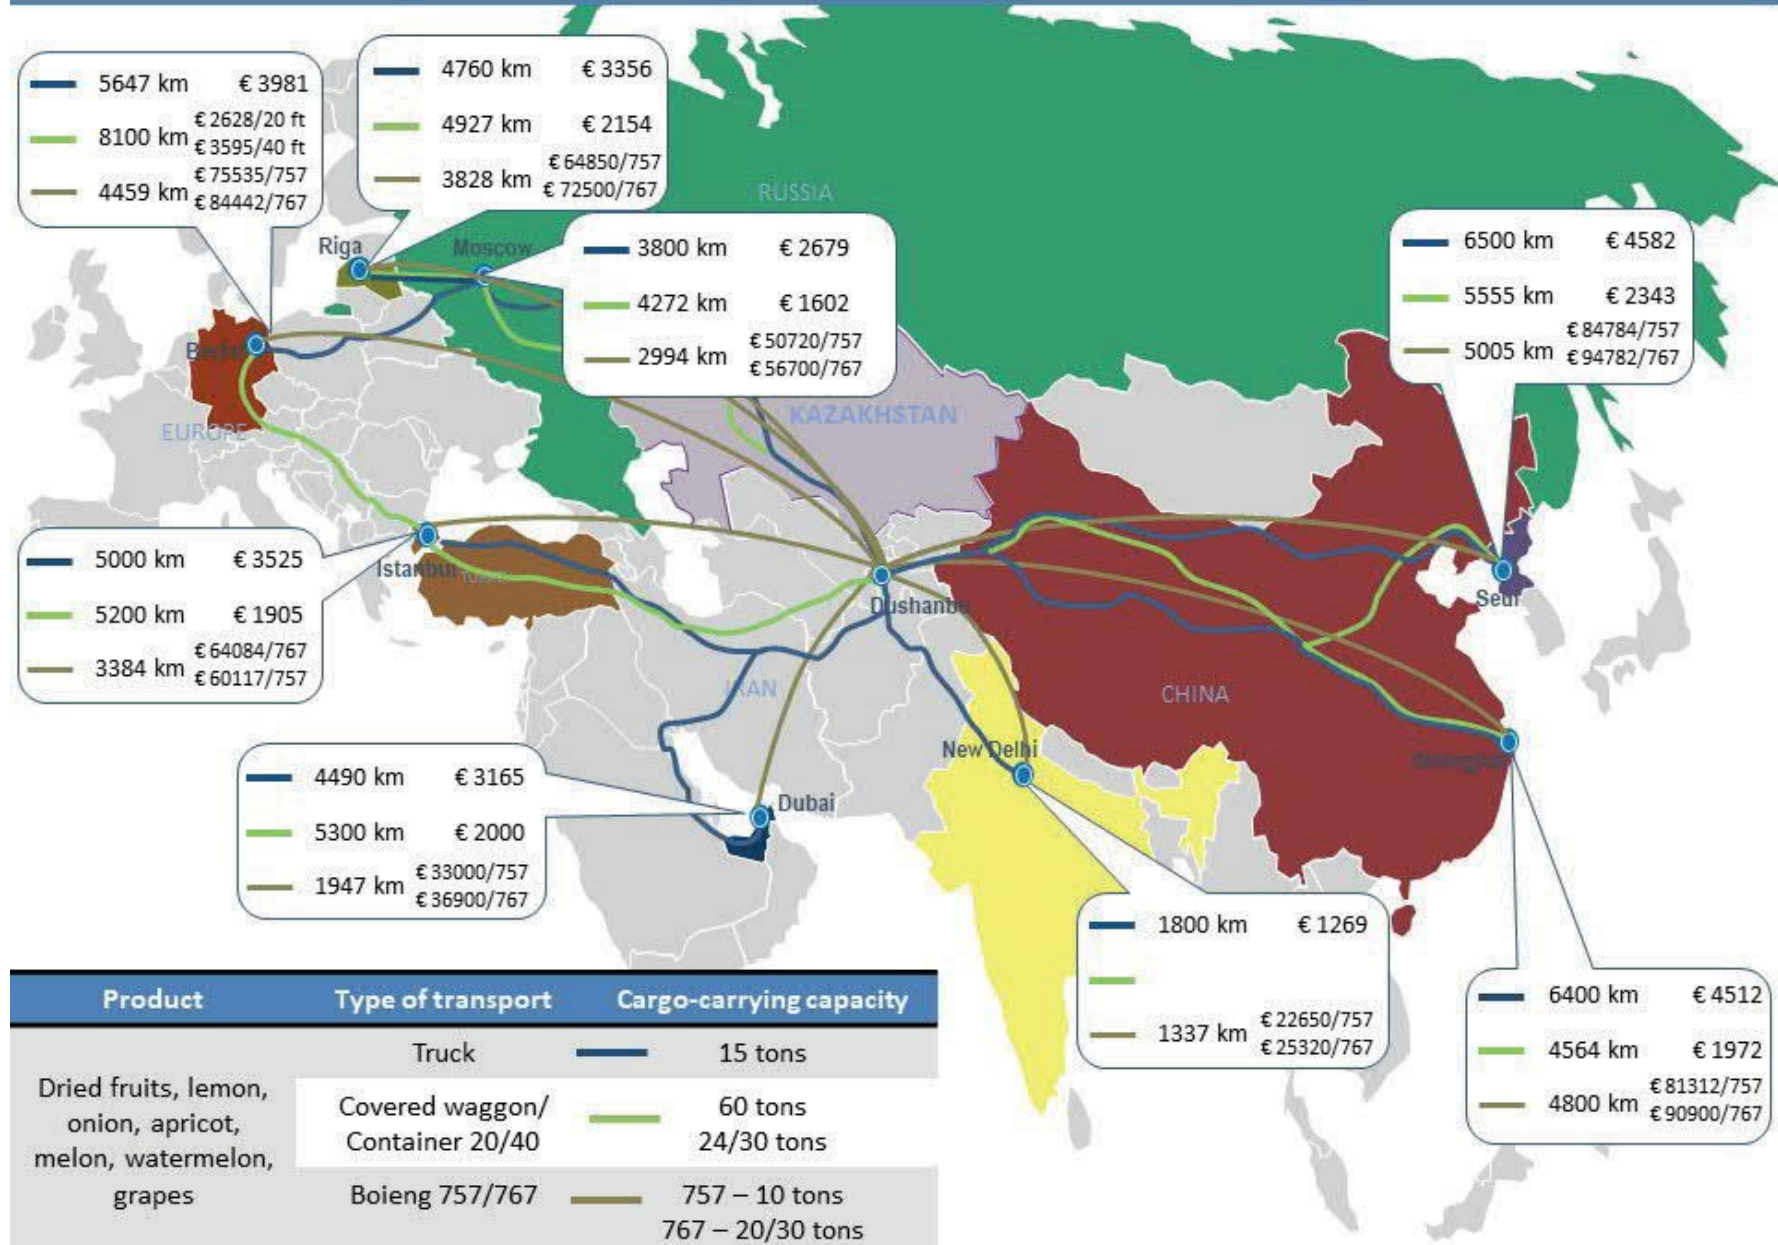

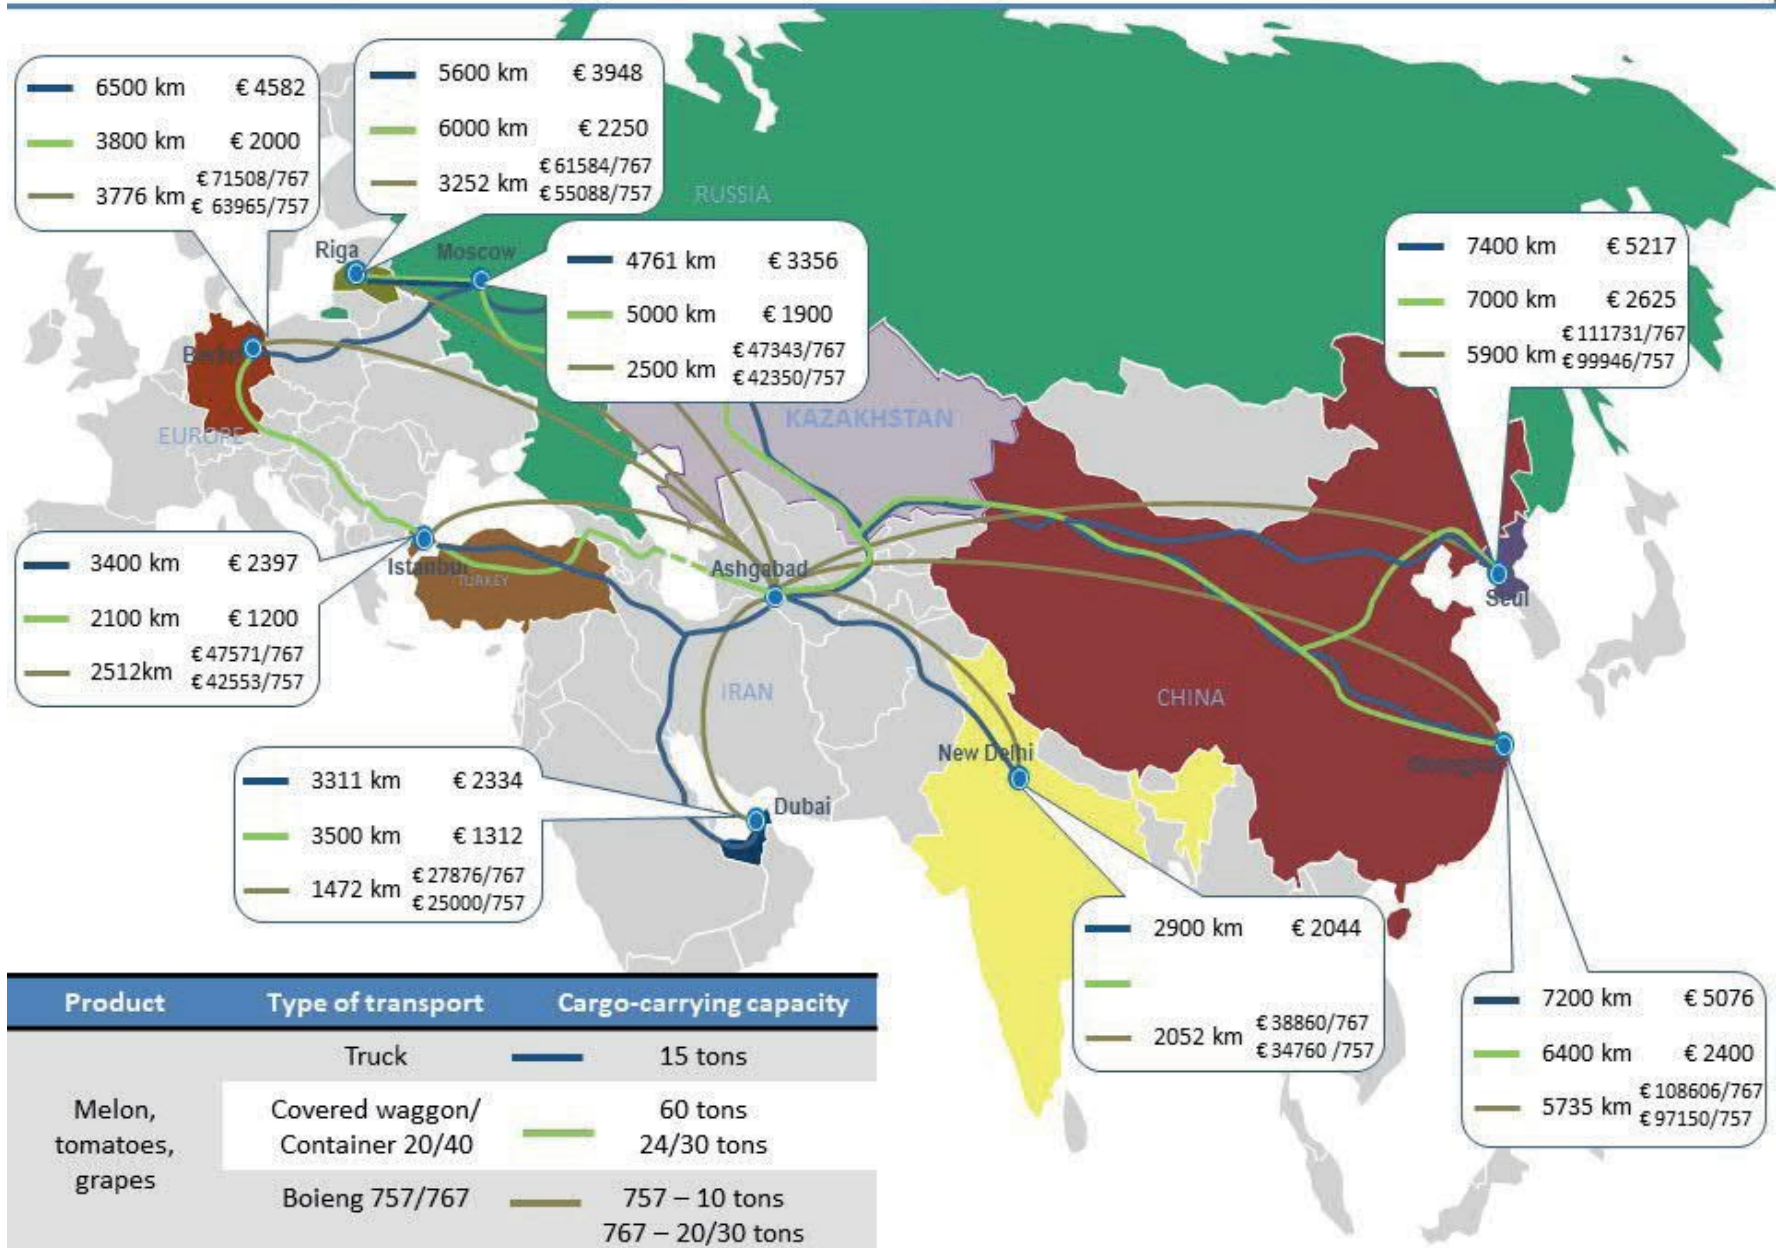

Transportation of perishable goods from Kyrgyz Republic

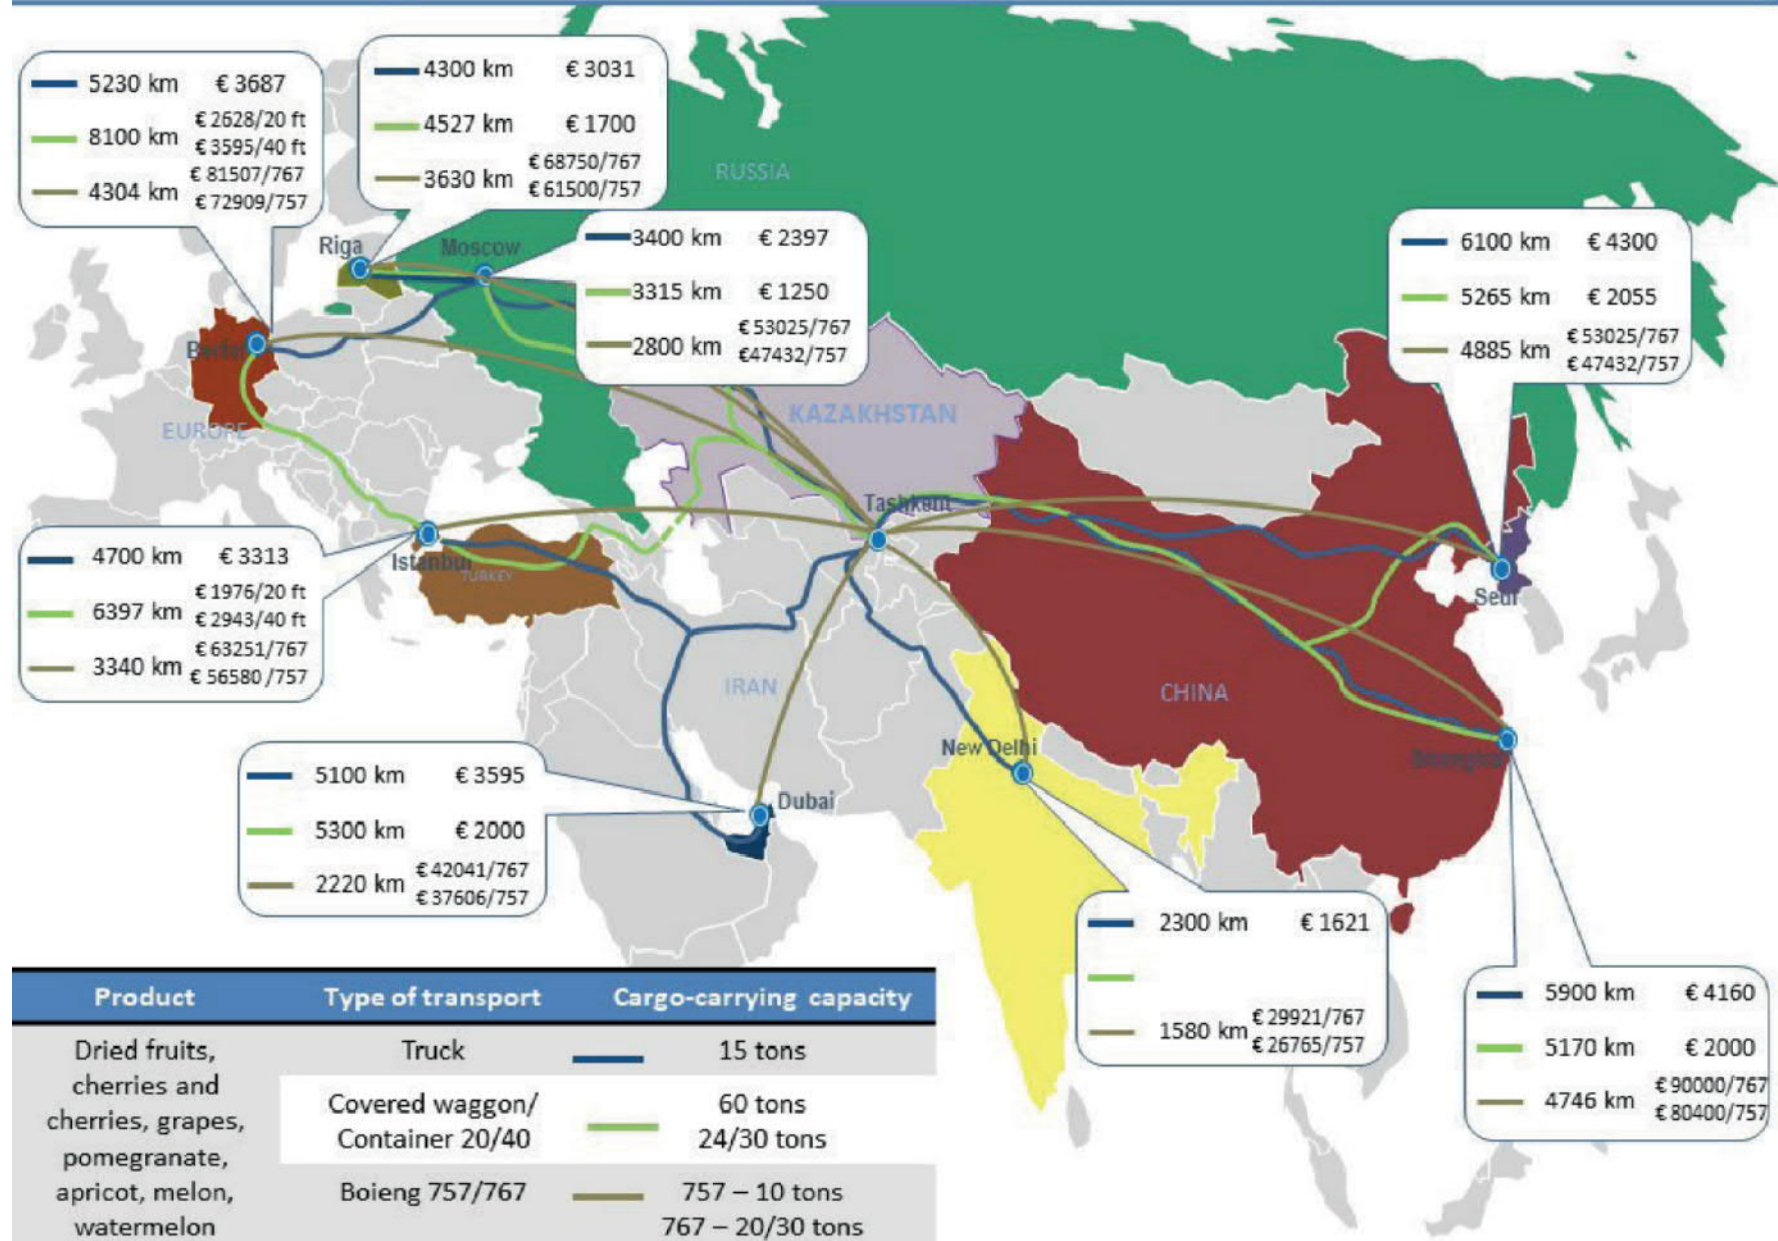

Transportation of perishable goods from Tajikistan 🇹🇯

Transportation of perishable goods from Turkmenistan

Transportation of perishable goods from Uzbekistan

Recommendations

1. Vehicles transporting perishable horticulture products need to meet the standards and conditions set out under the Agreement on the International Carriage of Perishable Foodstuffs (ATP). In accordance with the ATP Agreement, vehicles are issued Certificates of Conformity. When hiring a vehicle to transport perishable foodstuffs, check the ATP Certificate.

2. Road transport of products along certain long-haul routes is not permitted, for example, Almaty - Delhi; Bishkek - Seoul and Tashkent - Shanghai. Kazakhstan has not signed intergovernmental agreements on international road transport between Kazakhstan and India and South Korea.

Road transit through the territory of the People's Republic of China (PRC) is regulated by intergovernmental agreements. The Shanghai Cooperation Organization Agreement on International Road Transport has not yet entered force.

Rail transport along these routes is technically complicated and Delhi, Seoul and Shanghai are better served by air.
